

SUTPHEN™

SUTPHEN MOBILE PUMP TRAILER

Sutphen is proud to offer a new way to better serve your department and your apparatus. The Draft Commander 3000 is a unique, environmentally friendly, mobile pump testing unit. We can perform pump testing as per NFPA 1911-2007 guidelines and ISO standards at your location or ours. If we come to your facility, your apparatus never has to be taken out of service to perform the test, and in the event that you get a call, the unit can be disconnected quickly to allow you to respond. The mobile pump testing unit comes complete with all hoses, a complete set of testing discharge tips, and a portable testing telescoping monitor station, and is compatible with all brands of pumps. Also, the unit runs clean water to protect the pump, valves, and to avoid causing abrasive premature pump wear. Your pump test will be completed by an EVT certified technician, and you will be provided with a deficiency report upon completion. For mobile pump testing and all your service related needs, contact Sutphen Service today.
